

COVID-19

SECURE WITH
CHEMCLEAR

CLEAN | SANITISE | MAINTAIN | PROTECT

COVID - 19 is the largest public health challenge in a generation.

Coronaviruses are a large cluster of viruses known to cause illness in animals or humans. In humans, several coronaviruses are known to cause respiratory infections ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS) and Severe Acute Respiratory Syndrome (SARS). The most recently discovered coronavirus causes coronavirus disease COVID-19.

When someone who has COVID-19 coughs or exhales they release droplets of infected fluid. Most of these droplets fall on nearby surfaces and objects. People could catch COVID-19 by touching contaminated surfaces or objects, and then touching their eyes, nose, or mouth.

CHEMCLEAR are specialists in industrial chemical waste disposal and hazardous cleaning. With over 20 years experience, our family based business from the North of England is here to support you to get your workplace ready for COVID -19.

COVID-19 Emerging from Lockdown

CLEAN and SANITISE

Here at CHEMCLEAR we specialise in chemical related waste management and specialist industrial cleaning projects.

Requiring a high degree of chemical knowledge, Health and Safety procedures and working to the highest cleaning standards, our projects are carried out whilst appropriately protected with specialised PPE and breathing apparatus when required.

The current Corona Virus pandemic has affected businesses and households throughout the world and the risk of catching and spreading the virus has meant that most nations have introduced isolating and distancing measures, in an attempt to reduce the spread and slow the demand for urgent medical attention.

Many thousands of people have died and the risks remain high for second and third phase spikes in infections over the coming months if special measures in social distancing aren't followed, both in work and in our every day lives.

As we are now slowly encouraged to consider returning to work where possible, there are special measures the government are asking of employers in order to best prepare working environments for the safe return to work. **One of these measures is the increased and improved cleaning of high footfall areas with special attention to areas which are touched often or areas of public usage.**

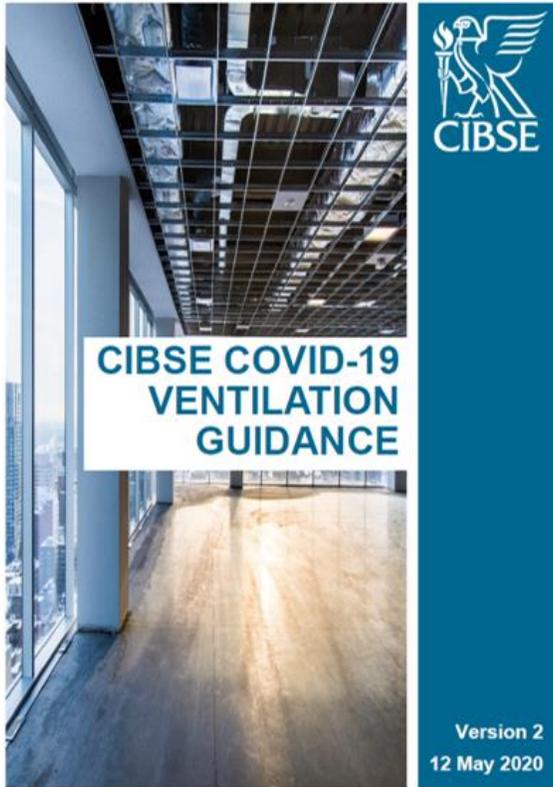

Whilst most establishments will have regular cleaners or a cleaning protocol established, these may not necessarily be suitable for the new standards required in order for Employers to be satisfied that their **'Duty of Care'** to employees and visitors have been discharged.

There is an increased dilemma for buildings which have regular visitors or open to the public such as Cinemas, Libraries, Restaurants, Health Centres, Dentists, **Leisure Centres** and **facilities where the risks of transferring the virus are present.**

CHEMCLEAR have already started to provide establishments with 'deep cleans' with specific emphasis on cleaning followed by disinfection. We have invested in the latest electrostatic disinfectant sprayers, foggers and approved hospital grade solutions to provide the best possible protection for your employees and visitors.

We work to British Standards, have suitable 3rd party and liability insurance and a team of experienced operatives in cleaning techniques, PPE knowledge and Risk management. All work is carried out in a methodical and controlled manner until all areas have been treated. Works are controlled by a team supervisor who re-checks the areas cleaned and approves the issue of a **Certificate of Cleansing** to be displayed for the confidence of all those who enter the area.

The **World Health Organisation** committee report that around 30% of new and remodelled buildings worldwide have been subjected to excessive complaints related to indoor Air Quality.

CIBSE have recently released further Ventilation guidance in relation to COVID-19.

Working in partnership with Pure Air Group our mission is to help provide the best air quality inside the spaces you occupy to enable full enjoyment without the worries of today's microbial activity such as VOC's, MRSA, E-Coli and Norovirus strains.

CIBSE COVID-19 Emerging from Lockdown

MAINTAIN and PROTECT

CHEMCLEAR in partnership with  pureairgroup

Our aim is to provide your facility with the best air quality inside the spaces that you occupy

As an approved agent of Pure air group we can offer **best in class** safety measures to help in the fight against the **Corona Virus** and other known viruses, removing odours, eliminating VOC's and destroying bacteria and moulds.

Pure air group, are the leading UK distributor in **HVAC technology** which can provide **24/7 protection** through an 'oxidation process consisting of hydro-peroxides, ozonide ions, super oxide ions, and hydroxide ions.

These friendly oxidizers revert back to oxygen and hydrogen after the oxidation of the pollutant'. Simply put, this system destroys air bourne viruses in an enclosed environment.

We have various units to cope with all size of rooms which need protecting - whether it be an individual office, full office suite, hotel, leisure centre, manufacturing facility, or even in the home - in fact everywhere where people congregate inside and where the risks are higher of transmission from airborne viruses, we have a solution which will help to greatly **reduce that risk.**
